

BTP-01K

Battery Terminal Protectors

Protect your batteries from dangerous short circuits while allowing access for battery clips.

- Also protects battery clip jaws from shorting.
- Made of tough, flexible, UV-resistant PVC.
- Fits most battery top terminals.

BTP-01K Kit contains:

- 2 - Flexible protectors, 2-1/2" diameter, 1 Red, 1 Black.
- 2 - Nylon cable ties, 1 Red, 1 Black.

Instructions included.

12V / 55 A-H Battery with battery clips connected.

eCanoe BTP-01 Mounting Instructions

Tools Required: scissors or wire cutter.

Voltmeter to check polarity if needed.

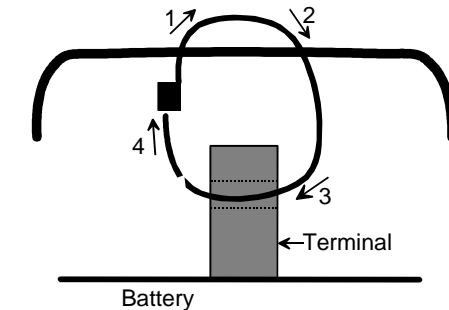

USE CAUTION AROUND BATTERIES!

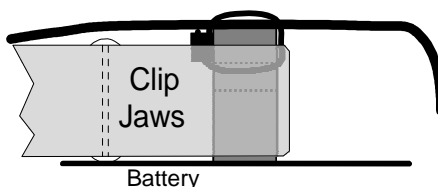

Be sure of the polarity of your battery terminals!

RED goes on the POSITIVE. BLACK on the NEGATIVE.

If your battery terminal does not have a hole, drill a hole through the soft metal using a 3/16" bit. Use caution not to short the battery terminals together. Trim any sharp edges with a knife blade. Recycle the lead metal chips properly.

Insert the flexible tie wrap from the bottom of the protector cap (1), back through the cap (2), then through the hole in the battery terminal (3). Run the tie wrap end into the latch (4) and pull it tight. Cut off any extra tie wrap.

A battery clip can be attached to the terminal by sliding it under the flexible protector cap. More than one clip may be attached as required.

These terminal protectors are re-useable. Replacement tie wraps may be purchased in hardware, electronics, & marine stores.
